1. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In component (2), the first general formula is missing a left hand bracket " [". This confuses the breadth of the formula.

2. Claim 2 provides for the use of the preparation of claim 1, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 2 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

3. The instant claims are neither taught nor suggested by the prior art. The instant claims require a specific organopolysiloxane that is limited by the specific terminal groups thereon, as well as the total nitrogen content. The claims also require a specific component (2) that must adhere to one of two limiting formulas. These two components are present in a specific amount range and the preparation as a whole is limited by the amounts of components (1) to (4) as claimed. The prior art fails to teach or suggest such a specific combination of specific components in the claimed amounts.

The references cited are cited as being of general interest.

The Examiner notes that the International Search Authority cites only "A" documents for the corresponding PCT application.
